

## GonioLight – WMM Update Instructions

## 1. Introduction

These instructions guide you through the update procedure of the GonioLight with the latest **World Magnetic Model** (WMM). This needs to be done to get an auto-declination on your position.

## 2. Preconditions

- GonioLight incl. batteries
- PC with Windows XP or higher, and a Java Runtime environment must be installed
- PC must be equipped with an RS232, or a USB to RS232 converter can be used
- SEV67-1 data cable, GonioLight to terminal (D-Sub 9), PN 902700
- “GonioLight Data Management” software
- WMM Update file (e.g.: GonioLight\_WMM-Update-2020.csv)

## 3. Install the GonioLight “Data Management Program” software

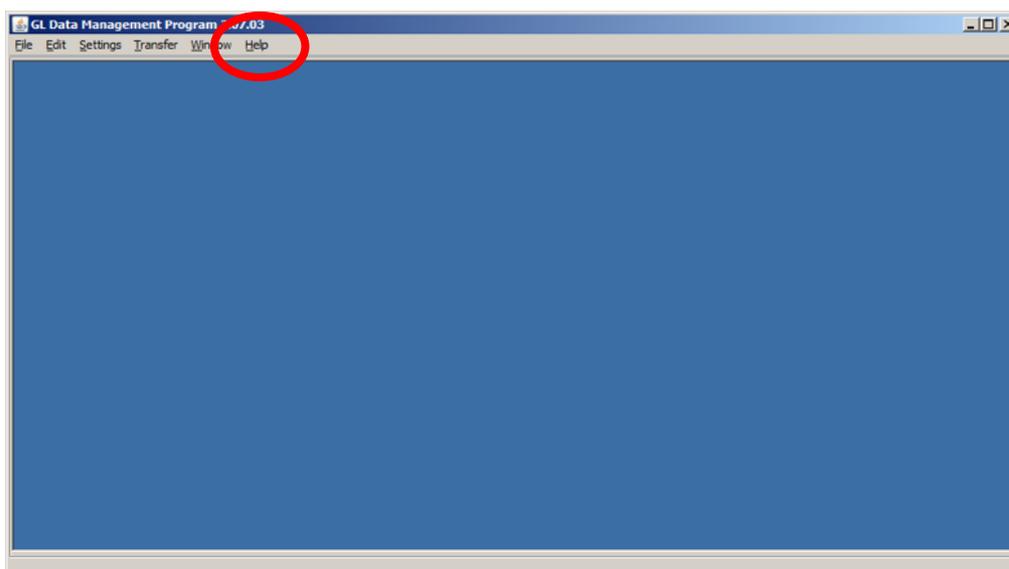

- Download the file “GonioLight WMM Update Package.zip” from our website [www.safraan-vectronix.com/product/goniolight-v-ti/](http://www.safraan-vectronix.com/product/goniolight-v-ti/)
- Unzip the file and start “GonioLight Data Management Setup.exe”
- Follow the installation instructions
- The zip file also contains the “GonioLight WMM Update 2020.csv” that you will need later

## 4. Connect the GonioLight to PC via cable

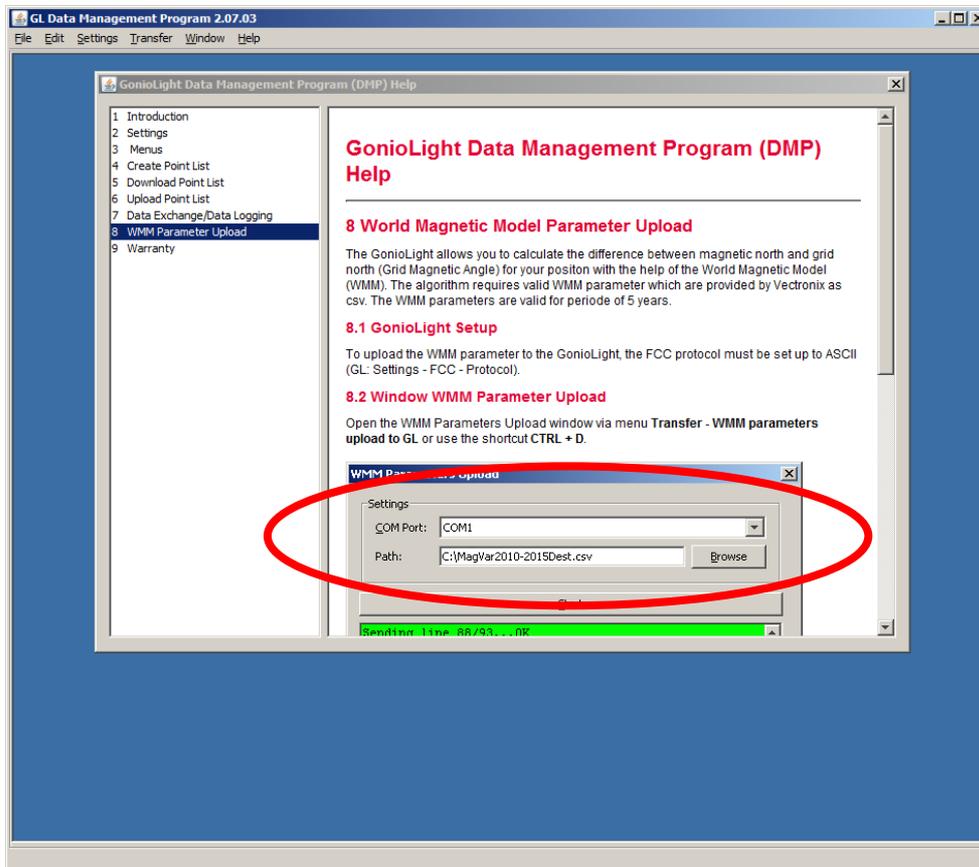

- Insert batteries into the GonioLight
- Connect one side of the cable SEV67-1 with the Fire Control Center Port of the GonioLight (marked white)
- Connect the other side of the SEV67-1 with a RS232 Port of the PC

## 5. Installing the new WMM file

- Power on the GonioLight
- Start the “GonioLight Data Management” program
- Via Help → Contents → Chapter 8: detailed information is available.

- Make sure that the right COM port and the right WMM file is selected
- Make sure that the GonioLight FCC Protocol is set to ASCII
